

Asset Management System

AssetSoft Ver. 2.1

Confidential and Proprietary

The information provided in this document is confidential and proprietary and is the property of Lemon Technologies and may not be disclosed to any third party or used for any other purpose than for which it is intended.

AssetSoft

Asset management is primarily a financial activity. As such, the Asset Management System should avoid tracking operational and other data about the asset and concentrate on the financial aspects. For an organization, the following assets, among others, all need to be tracked:

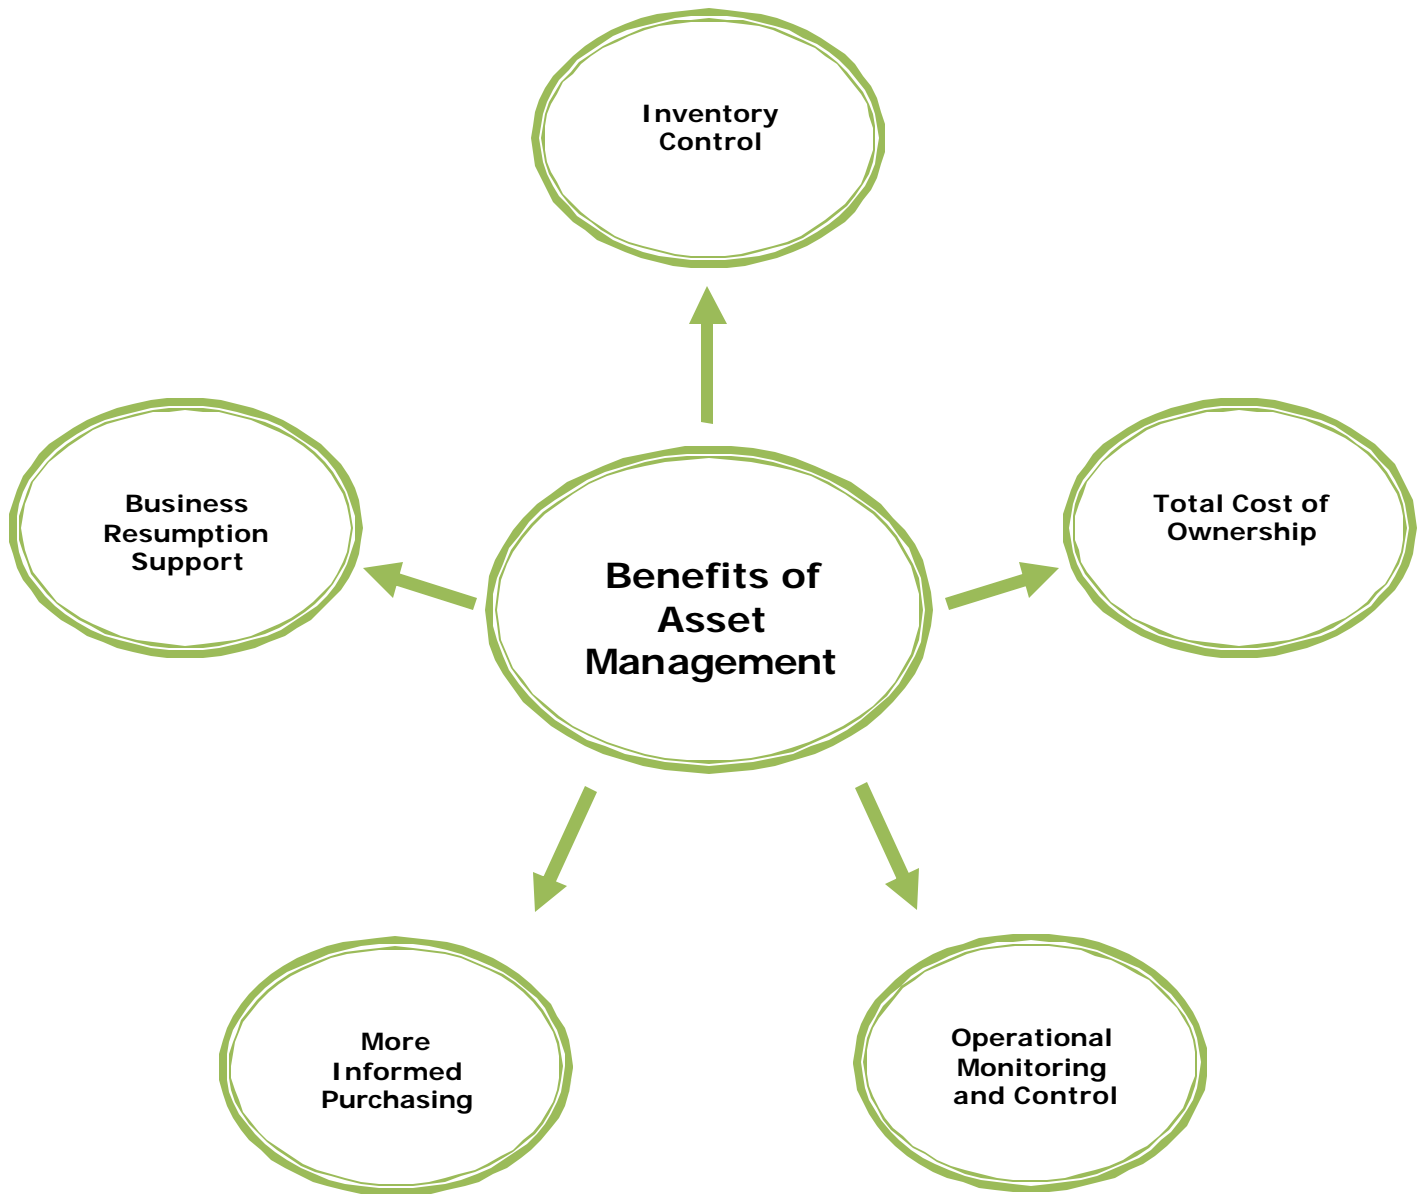

- Base machines
- Installed components
- Peripherals
- Operating system
- Licensed software
- Furniture & Fixtures
- Vehicles
- Plant & Machinerie
- Phones
- PBXs

Finding the right management tool for fixed asset tracking is crucial for a successful implementation. Since 2005, we have delivered Asset Management software along with our AccuSoft™ solutions, and now we have designed to solve Asset tracking and inventory control problems individually. We offer several Asset Management Systems, each integrated with Barcode & RFID technology. Barcode & RFID technology is critical in maintaining an accurate, timely fixed asset inventory control system. Our AssetSoft software allows companies to have total control over their fixed assets entire lifecycle.

Using state-of-the-art Barcoding & RFID technology, our suite of Fixed Asset Management products offers fully automated asset tracking & reconciliation capabilities. Whether it is a product inventory for furniture management or asset inventory for equipment or IT asset tracking, AssetSoft can manage all physical assets across the companies.

Asset Management System has been written in fourth generation language of PL/SQL and we have chosen Developer2000 6i as a Front End and Oracle 9i as Back End.
